AQA Physics GCSE Student Checklist

P6 Molecules and matter

| Name | | Class | Date | | |
|-----------------------|---|---|------|--|--|
| Lesson | Aiming for 4 | Aiming for 6 | | Aiming for 8 | |
| P6.1 Density | I can describe density as a property of a material and not a particular object. | I can explain why some materials will float on water. | | I can use the density equation in a wide variety of calculations. | |
| | I can state that the density of a material is the mass per unit volume. | I can calculate the density of materials. | | I can use appropriate significant figures in final answers when measuring density. | |
| | I can calculate the volume of some regular shapes and the density of materials, with support. | I can measure the density of a solid and a liquid. | | I can evaluate in detail the experimental measurement of density, accounting for errors in measurements. | |
| P6.2 States of matter | I can describe the simple properties of solids, liquids and gases. | I can describe the arrangement of the particles in a solid, liquid, and gas. | | I can describe the forces acting between particles in a solid, liquid, and gas. | |
| | I can name the changes of state. | I can explain the behaviour of a material in terms of the arrangement of particles within it. | | I can describe the changes in the energy of individual particles during changes of state. | |
| | I can state that there are changes in stores of energy associated with a material when its temperature is increased. | I can describe the changes in behaviour of the particles in a material during changes of state. | | I can explain in detail why the density of a material changes during a change of state, using a particle model. | |
| P6.3 Changes of state | I can state that the melting point of a substance is a temperature at which it changes from a solid to a liquid and vice versa. | I can state that the melting and boiling points of a pure substance are fixed. | | I can describe how the melting and boiling points of a substance can be changed. | |
| | I can state that the boiling point of a substance is the temperature at which it changes from a liquid to a gas and vice versa. | I can use the term 'latent heat' to describe the energy gained by a substance during heating for which there is no change in temperature. | | I can describe in detail the behaviour of the particles during changes of state. | |
| | I can describe the process of melting and boiling. | I can find the melting or boiling point of a substance by using a graphical technique. | | I can evaluate data produced by a heating experiment to discuss the reproducibility of the measurement of a melting point. | |

P6 Molecules and matter

| Name | | Class | | | Date | |
|-----------------------------------|---|-------|--|--|--|--|
| Lesson | Aiming for 4 | | Aiming for 6 | | Aiming for 8 | |
| P6.4 Internal energy | I can state that the internal energy of a system increases as it is heated. | | I can describe how the internal energy of an object can be increased by heating. | | I can use the concepts of kinetic and potential energy to explain changes in internal energy. | |
| | I can identify which changes of state are related to increases in internal energy and which are related to decreases. | | I can describe how the behaviour of particles changes as the energy of a system increases. | | I can describe the changes in the size of intermolecular forces during changes of state. | |
| | I can outline the behaviour of particles in solids, liquids, and gases. | | I can describe the energy changes by heating between objects within the same system. | | I can explain in detail why the pressure of a gas increases as it is heated. | |
| P6.5 Specific latent heat | I can state that heating a material will increase its internal energy. | | I can describe the changes in particle bonding during changes of state. | | I can perform a variety of calculations based on the latent heat equation. | |
| | I can describe energy changes during melting and vaporisation. | | I can calculate the latent heat of fusion and latent heat of vaporisation for a substance. | | I can combine variety of equations to solve problems involving heating. | |
| | I can measure the latent heat of vaporisation for water. | | I can measure the latent heat of fusion for water. | | I can evaluate the reproducibility of a measurement of latent heat based on collated data. | |
| P6.6 Gas pressure and temperature | I can state that as the temperature of a gas in a sealed container increases, the pressure of the gas increases. | | I can describe the behaviour of particles in a gas as the gas is heated. | | I can describe the linear relationship between changes in temperatures and pressure for a gas. | |
| | I can describe a gas as consisting of a large number of rapidly moving particles. | | I can outline Brownian motion and how this provides evidence for the particle nature of matter. | | I can explain Brownian motion in terms of particle behaviour and collisions, relating the speeds of smoke particles and air molecules. | |
| | I can describe pressure as being caused by collisions of gas particles with the walls of its container. | | I can describe the relationship between an increase in the temperature of a fixed volume of a gas and the increase in pressure of the gas. | | I can describe in detail how the relationship between the pressure of a gas and its temperature can be investigated. | |
